

Ekko - Milestones 2+3

Version: 0.3

Prepared by: Ekko Core Team

Generated: 2026-02-11 19:32 UTC

How to read this document

- Highlights - concise summary of what was achieved.
- Links - direct links to repositories, screenshots, or delivery documents.
- Screenshots - visual confirmation of implemented workflows.

Primary OSS repository: <https://github.com/web3ekko/ekko-ce>

1. Go-live version of the application with mobile submissions to iOS App Store and Google Play Store

Highlights

Go-live CE stack is publicly available and deployable via Docker Compose. Go-live references are provided via the landing page and live app endpoints, with final submission receipts to be attached to this pack.

Links

- [Ekko landing page and docs](#)
- [Ekko live app](#)
- [Public CE launch readme](#)
- External attachment expected: submission confirmation screenshots and review status exports.

Milestone 2

Delivery item	Highlights	Links
Initiate partnerships with key enterprises in Avalanche L1s (Target: 5 partners)	Partnership-ready workflows and group subscription UX shipped for enterprise onboarding.	Alert Groups overview Group visibility controls Hosted production portal External artifact to attach: signed partner roster / MoUs (internal).
Design Community Edition branding and UI adjustments	CE branding, positioning, and OSS launch assets prepared.	CE product README GitHub social preview spec Social preview image
Outreach to community developers for collaboration	Developer-facing API and onboarding materials published in CE docs.	API endpoints API developer guide Developer API UI page
Implement core notification features for Community Edition	Notification center UI and backend notification endpoints implemented.	Live notification panel screenshot Notification API routes Notification cache schema
Adapt frontend interfaces for Community Edition	Dashboard, alert groups, alert detail, and template flows adapted for CE workflows.	Dashboard screenshot Template assignment modal Dashboard implementation overview
Public access for Community Edition	Public repository and self-hosted quick-start published.	Public GitHub repository One-command compose deployment Public environment template
Prepare documentation and tutorials	Technical docs published for API, dashboard, wasmCloud, and setup workflows.	Root documentation API documentation wasmCloud docs
Release beta version with at least 5 partners included	Beta delivery package prepared with partner-oriented alert group workflows and hosted onboarding.	Beta UI snapshot Hosted beta/go-live environment External artifact to attach: partner inclusion ledger (internal).

Milestone 3

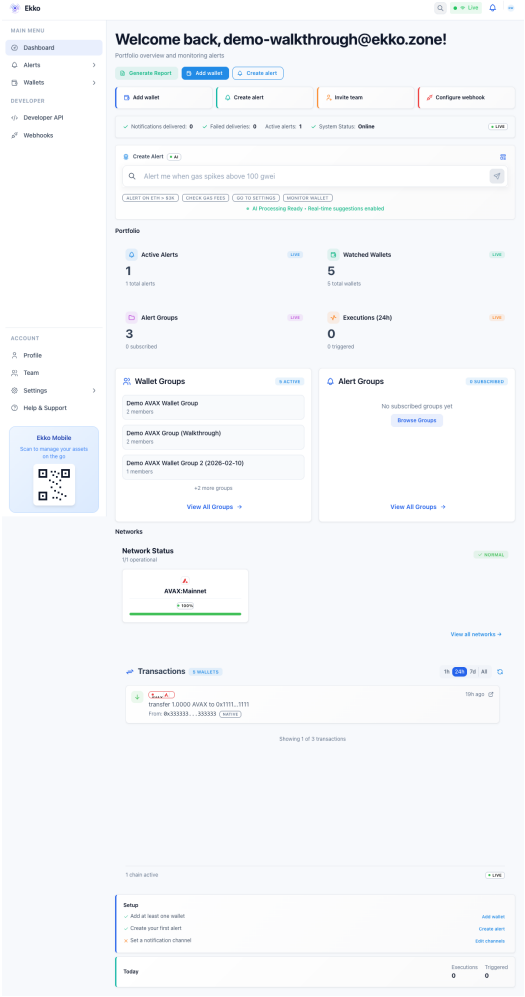

Delivery item	Highlights	Links
Testing and QA for both editions	Comprehensive backend and runtime test suites present across CE services.	API test suite wasmCloud test suite Application service tests
Testing and QA for the clients (web and mobile)	Web client unit and E2E coverage present; mobile release links tracked externally.	Dashboard QA tests Landing page and docs Live app
Testing and QA for browser extensions	Browser extension QA tracked as external artifact for delivery package.	Issue tracker / QA logs External artifact to attach: extension QA report.
Security testing and vulnerability assessments	Security-focused authentication architecture and validation tests included.	Authentication security overview Authentication test coverage Auth API contract
Bug fixes and performance optimizations	Iterative fixes and runtime improvements documented through tests and optimized data flow components.	Polars evaluation provider Core service layer Commit history
Official release of Ekko Community Edition	Community Edition launch assets and public onboarding completed.	Public CE repository Official CE launch README Release records
Launch of paid features in Enterprise Edition	Enterprise paid feature rollout tracked via hosted production platform and private product controls.	Enterprise hosted platform External artifact to attach: billing/feature flag rollout report.
API documentation for developers	Developer-facing API contracts and onboarding docs published.	API endpoint catalog Detailed API documentation Quick-start and API onboarding
Feedback collection and iteration on both editions	Feedback loops supported through issue tracking, release iterations, and roadmap updates.	Issue-based feedback channel Iteration and delivery PRs Continuous iteration log
Ongoing API support and developer onboarding	Persistent support artifacts available in docs and endpoint references.	API support documentation Endpoint usage reference Developer onboarding UI
Planning for future features and updates	Forward-looking updates tracked through roadmap docs and release planning artifacts.	Current release scope Launch collateral planning Roadmap board (if enabled)
Release go-live version (alpha)	Go-live alpha package delivered with public CE deployment path and hosted environment.	Landing page and docs Hosted go-live endpoint Go-live UI screenshot

Screenshots

These screenshots are from the public repository and validate live product workflows for Community Edition.

Delivery Notes

This proof-of-delivery package prioritizes verifiable links from the public OSS repository. Items that require private operational systems (partner contracts, store submission receipts, enterprise billing) are explicitly marked as external attachments for the final client delivery bundle.
